SUMMARY

Since my mother enrolled me in my first game programming course in 6th grade, I was hooked on computer programming. I remember being 13 years old and trying to install the Unreal game engine on to our family computer. Fast forward a few years, and my Github account has 70 repositories (and counting), I regularly post articles to Medium related to Tech, and my curiosity is just as strong and passionate as ever.

SKILLS

Front-End: HTML5, CSS3, Bootstrap, Sass+Less, Vanilla Javascript, and React/Redux.

Back-End: Node, Express, Knex, SQL, MongoDB, and Python

EXPERIENCE

Web Developer/Designer - *freelance*

February 2018 - PRESENT

- Worked With international clients, developing and designing web applications
- Maintained and improved existing client codebases
- Primary tools were React, Wordpress, and Shopify.
- Communicated openly and transparently to ensure client needs were met

PROJECTS

Colombian Restaurant Site:

- Client website made with HTML, CSS, and javascript
- Managed photoshoot for the pictures on the site
- Implemented form that allowed client to start catering
- https://correitaelpaisa.com/

Corona Virus Tracker:

- Global Corona Virus tracker built with React
- Made API calls to retrieve live data of over 85 countries
- Used Chartjs for data visualization and graphing
- https://covid-tracker-1kx08oeie.now.sh/
- GitHub repo:https://github.com/JordanAlexander22/CovidTracker

EDUCATION

Lambda School of Computer Science and Software Engineering
